Recent Trends in Electronics and Communication Engineering 2.0
(RTECE 2.0, 2022)

Organized by

Department of Electronics & Communication Engineering

October 10 - 14 , 2022

Coordinators:

Ms. Kiran Rathi, Dr. Monika Mathur, Ms. Suman Sharma
and Dr. Vikas Pathak

Co-coordinators:

Ms. Namrata Saxena and Mr. Dinesh Kumar

Student Coordinators:

Priya Gupta, Umang Sharma and Utkarsh Khandelwal

Program detail:

The Department of Electronics and communication, SKIT Jaipur organized a 5-Days lecture series on “Recent Trends in Electronics and communication Engineering 2.0” from 10th October to 14th October 2022, in hybrid mode, with the objective of educating students and spreading awareness about the latest advancements in Electronics and communication engineering. The lectures were delivered by accomplished experts and academicians who have achieved pre-eminence in the fields of Electronics and communication engineering followed by interactions and queries. In this lecture series over 160 participants were well connected for the entire duration of the lecture series. Coordinators of the lecture series were: Ms. Kiran Rathi, Dr. Monika Mathur, Ms. Suman Sharma, Dr. Vikas Pathak; Co-coordinators were: Ms. Namrata Saxena and Mr. Dinesh Kumar; Student Coordinators were: Priya Gupta, Umang Sharma and Utkarsh Khandelwal.

The chief guest of this program was Dr. Manish Tiwari , Prof. & HOD ECE Manipal University, Jaipur and guest of honor was Dr. Kushmanda Saurav, Asst. Prof., dept of Electrical Engineering, IIT Jammu. Prof. Mukesh Arora, Head OFA and ECE dept. welcomed the guests.

Inaugural ceremony was followed by an expert session by **Dr. Kushmanda Saurav** on the topic “Design of circularly polarized antennas for microwave and millimeter wave applications.” Lecture was held in online mode.

Dr. Anup Kumar Sharma, on the topic “Thin film optoelectronic devices and flexible nanoelectronic devices.” In online mode

Mr. Rajeev Kumar Gautam, Program Manager, Intel. His topic of session is Semiconductor industry overview and trends. In which he included the semiconductor industry is estimated to continue its robust growth during the forecast period to accommodate the increasing demand for semiconductor materials in emerging technologies, such as artificial intelligence (AI), autonomous driving, the Internet of Things, and 5G, coupled with competition among key players and consistent spending on research and development.

Mr. Ajay Kumar Sharma. He enlightened us on the topic Micro Energy Harvesting. He explained the energy harvesting methods and how small scale devices such as wireless personal health-monitoring systems or environmental sensors, making them independent of rapidly exhausted batteries or location restricted power grids. Enabling this unprecedented level of autonomy, particularly at the micro-scale, requires innovation in harvesting devices, power management circuits, and complete system design, in order to ensure the desired functionality and reliability of the respective device even if the supply of ambient energy varies with time.

Dr. Urvashi Shukla, Assistant Professor, Department of Computer Science Engineering, Banasthali Vidyapith. On the topic Image Processing with Medical Perspective in which she explained about the classification of image segmentation and Biomedical signals fetching, image formation, processing of image, and image display for medical/clinical diagnosis based on extracted features from the signal (1D), images (2D) and Video (3D). Image processing has proved its significance in medical analysis and health care. The imaging modalities play a vital role in acquisition of signals and images from the human body which involves invasive and non-invasive

methods. Also discussed on Medical Imaging mainly concentrates on uncovering and revealing internal structures which are hidden by the skin and bones. In addition, it is used to analyze, diagnose, recognize and treat the illness or disease. This technique is particularly useful for the specialists to make laparoscopic surgeries for viewing the interior parts without actually opening the body. X-ray imaging uses CT scanner, Ultrasound and Magnetic Resonance Imaging. In this way, specialists can look at the body's obscure or hidden third dimension. By using CT Scanner, inside segments can be exposed and diseased areas can be recognized and spotted very easily. While considering MRI, it gets a signal from the magnetic particles of the body and turns its magnetic tune and with the help of a Computer, converts scanned data into images of the internal organs.

Dr. Dinesh Sethi, from JECRC University, Jaipur, shared his valuable knowledge on “Control System Engineering” explaining the stability of control systems and various stability criteria.

Dr. Parul Tyagi, JECRC college, Jaipur. She delivered her lecture on “Digital Signal Processing,” She told about different types of Digital Filters.

Day 4 session 2 of the lecture series was concluded with everyone being motivated from the inspirational talk by Mr. Anjan Das on his life experiences, he talked about how he never lost his hope even in the worst situations, he always aimed higher, followed his passion, gained trust of everyone and encouraged us to do the same.

Dr. Dinesh Yadav, Manipal University, Jaipur, took an expert session on the topic Design and development of Reconfigurable antennas in offline mode.

Mr. Ankur Vijay, Senior Silicon Design Engineer, AMD Technology, Hyderabad took an expert lecture on “Recent trends in memory design” in online mode. The discussed areas in lecture series are of great benefit for the participants.

It was a life-long learning for all participants. The discussed areas are of great benefit for the attendees. Feedbacks of the lecture series were collected from the participants.
