## Swami Keshvanand Institute of Technology, Management and Gramothan, Jaipur

### **Digital Studio “electronic Smart Learning And Teaching Environment” (e-SLATE)**

To prepare against challenges especially, in teaching point of view of recent orientation of entire education system towards digital means, it has become an essential need to prepare, Evolve and implement a suitable e-learning system in the Swami Keshvanand Institute of Technology, Management & Gramothan. Regarding this, we developed standard e-content (lecture recordings) for courses taught in different semesters of various engineering streams. This e-learning content which is created through three Digital Studios. These digital studios have been named as ICT e-SLATE 1, ICT e-SLATE 2, and ICT e-SLATE 3. In these digital studios platform we have recorded lectures of all subject of previous semester is about 2000 plus lectures and several online conferences/webinars/FDPs etc. held in studios.

#### **Description of the system:-**

The system is intended to record classroom lectures using audio-video sources and for live lectures. These lectures have been recorded on suitable tapeless or file-based media. Camera is placed in front of “Newline Interactive Flat Panel (IFP)” of 75 inches which is mounted on a wall and connected to the CPU (i3/6<sup>th</sup> generation/500gb HDD/ DVD/ 4gb DDR3 Ram) one CPU is placed in each studio for IFP. This IFP work as monitor for desktop PC for presentation purpose as well as used as touch screen type digital data tablet. This Interactive flat panel is fully window-based educational setup as well as Android based with a superior touch.

Camera is placed in front of IFP is the main source of video capture. One camera is placed in each Studio which is connected through the video capture card installed in each computer systems and also separate computer system is placed in each studio for recordings (i7/9<sup>th</sup> generation/ 1 TB HDD/ 8 Gb DDR4 RAM). This video capture takes input from camcorder as video source and also takes audio input from audio receiver through AUX cable. The teacher is provided with a clip type wireless lavalier microphone. This lavalier microphone gives output to the audio receiver as input and this receiver gives output to the video capture card.

All these audio-video sources are to be routed to video capture card installed in computer. After that open broadcaster software (which we use for recording) called OBS installed on this computer which made all this audio-video as input source and record both of these in a single video format.

For that, we made setting in OBS. First, we add '+' source as video capture Device in software. Second, we add '+' source as audio input capture which filter noise in audio.

The combined output of selected audio and video have the provision to insert logo or any text information before they are recorded on media.

This video capture gives display output to the Television mounted on opposite wall of IFP which shows output of camera in lecture recording and live interaction in live class.
