About SKIT, Jaipur

Swami Keshvanand Institute of Technology, Management & Gramothan (SKIT) inspired from the learnings of Swami Keshvanand, was established in the year 2000 by Technocrats and Managers Society for Advanced Learning. Today the Institute is recognized as one of the centers of academic excellence in Northern India. The Institute is affiliated to Rajasthan Technical University, Kota for offering Postgraduate and Graduate Courses in Engineering and Management. SKIT has been ranked no.1 engineering Institute in Rajasthan by RTU, Kota consecutively for the last four years. Located in the Pink City Jaipur, which is a blend of traditional history and modern outlook, SKIT is putting in efforts for making industry ready engineers and managers through effective Industry–Institute Interface. Apart from University curriculum SKIT also pursues activities for research and development in various fields.

Department of Electrical Engineering

The Department of Electrical Engineering is distinctly focused towards integrating academics with cutting edge technology in the field of Electrical Engineering. All efforts are subtly harnessed with the aim of preparing the budding engineers to face the challenging dimensions of technical excellence in areas of Electrical Engineering. The department puts in consistent efforts for field exposure to students through various research - oriented projects taken up for

meeting the industry demands. The Department offers a perfect blend of electrical and electronics related courses to help students pursue a professional career or higher studies. The graduates of the Department venture out for a wide range of organizations including reputed MNC's, PSU's, Armed Forces and Indian Engineering Services (IES), etc.

Objectives of the FDP

India's power sector is witnessing a slew of reforms aimed at shaping a robust energy landscape for the country. In a deregulated power system, the high integration of distributed energy resources and renewable generation crops ups a threat for system operators and scheduling coordinators to sustain secure and reliable grid operations. Conducive competency for flexibility is progressively growing attributable towards sustainable development viz. widespread of electric vehicles, energy storage technology advancements, and rooftop photovoltaic systems in domestic application areas, among other things. Techno-Economic Assessment (TEA) is an integrated valuation of the technical performance indices and financial viability of Flexibility proficiency. This FDP surveys and likens existing studies and multidisciplinary approaches covering economic, environmental, social, technical, and regulatory aspects in the deregulated power system to recognize potential hurdles and opportunities for techno-economic feasibility and holistic decision making in the R&D background. This FDP will elucidate the flexibility competency in deregulated power systems and its pertinent dimensions. In addition, this FDP is beneficial for industries, as well as policymakers and academics regarding the cost - effective solutions to emergent glitches. The objective is to provide exposure to the participants

to the state-of-the-art emerging trends and development in Deregulated Power System policies and structure, Strategic Trading Platforms, and Power System Operation Planning through interaction with eminent experts from IITs, NITs, and other reputed Institutions/Industries.

The module for lectures would be :

- Large Scale EVs Integration
- Power Quality
- Electricity Regulatory Framework
- Operational Scheduling
- Techno-economic Assessment
- Hedging & Uncertainty Modeling
- Renewable Generation Integration
- Aggregator as Flexibility Service Provider
- Ancillary services
- Low Inertia Systems
- Network Pricing
- Forecasting

Key Takeaways

- Large scale RE integration poses new challenges and necessitates flexibility to manage netload variations
- Insufficient flexibility may result in load and RE curtailments, price spikes, and ramp insufficiency events

Investment Cost

- Coupling energy demand for heat, fuels and mobility by using power-to-heat (heat pumps, resistors), power-to-gas (hydrogen from renewable electricity) and power-to-mobility (battery EVs) can provide significant flexibility
- New market product and business models are essential to harness flexibility and integrate more RE.

BIDS OR OFFERS

- BLOCK BID**
 - A stack of MW levels and the corresponding prices
- LINEAR OR CONTINUOUS BID**
 - A linear function of bid price and quantity
 - $P(Q) = kQ + c(Q)$
 - For marginal price based bidding, $(k=1)$
- BIDS IN OLIGOPOLISTIC ELECTRICITY MARKET**
 - Participants Aim: Profit Maximization
 - Submitted Bid Price > Marginal cost
- NUMBER OF BID BLOCKS**

Techno-Economic Assessment of Flexibility Competency in a Deregulated Power System

(September 20 - 24, 2021)

Objective of the Faculty Development Program

India's power sector is witnessing a slew of reforms aimed at shaping a robust energy landscape for the country. In a deregulated power system, the high integration of distributed energy resources and renewable generation crops ups a threat for system operators and scheduling coordinators to sustain secure and reliable grid operations. Conducive competency for flexibility is progressively growing attributable towards sustainable development viz. widespread of electric vehicles, energy storage technology advancements, and rooftop photovoltaic systems in domestic application areas, among other things. Techno Economic Assessment (TEA) is an integrate valuation of the technical performance indices and financial viability of Flexibility proficiency. This FDP surveys and likens existing studies and multidisciplinary approaches covering economic, environmental, social, technical, and regulatory aspects in the deregulated power system to recognize potential hurdles and opportunities for techno-economic feasibility and holistic decision making in the R&D background. This FDP will elucidate the flexibility competency in deregulated power systems and its pertinent dimensions. In addition, this FDP is beneficial for industries, as well as policymakers and academics regarding the cost - effective solutions to emergent glitches. The objective is to provide exposure to the participants to the state-of-the-art emerging trends and development in Deregulated Power System policies and structure, Strategic Trading Platforms, and Power System Operation Planning through interaction with eminent experts from IITs, NITs, and other reputed Institutions/Industries.

Outcome of the Faculty Development Program

All the sessions were very much enlightening. The presented areas are of vast knowledge gain for the participants as the topics are competent enough with the current working domain. Participants were enlightened with the most widely used advanced technologies in the deregulated power system domain for large-scale integration of renewable and Electric Vehicles through flexibility mechanisms at source and load sides. This in turn will act as a catalyst in research activity. The content awareness of the participants in the respective domains is enhanced. The participants were also given some illustrations regarding the further scope of the program. Last but not the least when the house was open for questions the participants were keen to ask and with the same level of enthusiasm they were justifiably answered by all the expert speakers. This FDP has not only helped the participants in their prospectus but has also helped them widen their expertise and understanding.
