(57) Abstract :

The present invention is related to a system and method for real time monitoring and predicting heart health performance. The principal objective of the present invention to solve the inadequacies in prior art related technologies and design of system for real time monitoring and predicting human heart health performance. The present system and method is used for detecting heart routine, description and irregularity herein. The system and method examine and illustrate cardiac current condition by electrophysiological signals that assist to analysis of arrhythmias in advance of a heart failure.
