P-type and N-type Solar Cells

The first solar cell produced by the Bell Laboratories in 1954 was a n-type solar cell. Progressively, the p-type structure took the lead, historically because in the early days of its development, the solar technology was mainly used for space applications and p-type structure had better resistance to radiations for space applications.

- **Efficiency:** most powerful solar cells today available on the market are n-type solar cells. The main reason behind their superior efficiency is the higher carrier lifetime. The technology is not prone to what is called boron-oxygen defect. When using n-type solar cells, doped with phosphorous, this effect disappears. Also, n-type solar cells are less prone to metallic impurities of the silicon
- **Light Induced Degradation effect:** n-type solar cells are immune to LID, again because of the absence of the boron-oxygen defect.
- **Cost:** in general, except minor differences, the process to manufacture ingots does not differ much between p-type and n-type solar cells. The process of fabrication includes more steps and makes a module more expensive to build with n-type solar cells.

Plasmons in gapped Dirac systems (chiral)

When is Berry curvature correction important? - use symmetry

- Spatial inversion: $\Omega_n(\mathbf{k}) = \Omega_n(-\mathbf{k})$
- Time reversal: $\Omega_n(\mathbf{k}) = -\Omega_n(-\mathbf{k})$

For gapped Dirac material:

$$\Omega(\mathbf{k}) = \tau_z \frac{2(\hbar v_F)^2 \Delta}{(\Delta^2 + (2\hbar v_F k)^2)^{3/2}}$$

Slow Light Enhanced Si Hybrid Waveguide

Group Index: 64
Group Delay: 16psec

$$\Delta\varphi = \frac{2\pi \Delta n_{eff} L}{\lambda_0}$$

Why ITO...??

- Exhibits Epsilon near zero (ENZ = 1.24μm) in near-infrared region
- Electrically tunable permittivity
- Unity order change in refractive index
- Drude-Lorentz model supports change in permittivity

Change in ITO's refractive index is because of change in carrier concentration

Accumulation of charge carriers with voltage in pin junction introduced near hollow core

- Low loss guidance of slow light mode
- Slow light enhanced phase modulation
